
Error correction and loss of morphostatic control
(a) $\alpha_3 = 0.80 > \alpha_c^*(\varphi)$ — corrects
(b) $\alpha_3 = 0.30 < \alpha_c^*(\varphi)$ — trapped near V_-
pattern inversion
Cell index i
Time
Ω
V_i
Error relative to morphogenetic attractor (V_i^*)
$\alpha_c^* = 0.5625$ (fully committed cells)
$E_\Omega(t) = \frac{1}{|\Omega|}\sum_{i\in\Omega}|V_i(t) - V_i^*|$
$\alpha = 0.80$ — correction succeeds ($E_\Omega \to 0$)
$\alpha = 0.30$ — secondary attractor traps (E_Ω persists)
Time since perturbation
