(A) Perturbed cell and per-cell energy
escapes
stays
V_{30}
$\mathcal{H}/N$
time
(B) Arrhenius dependence
$\bar{G} = 0.03$
$\bar{G} = 0.05$
$\bar{G} = 0.07$
$\bar{G} = 0.10$
mean escape time
$1/\sigma^2$
(C) Barrier vanishes at the saddle-node
reduced single-cell barrier
fitted from escape times
barrier reachable at $\sigma = 0.05$
effective barrier ΔU
uniform coupling $\bar{G}$
